AVANTIK CSF20

Automatic Film Coverslipper

FASTER SLIDE DELIVERY. CONSISTENT COVERSLIPPING. GREATER LABORATORY EFFICIENCY.

As slide volumes grow and staffing resources remain constrained, coverslipping can become a workflow bottleneck that slows turnaround times and places additional pressure on laboratory teams. Inconsistent coverslipping may contribute to slide quality issues, rework, and operational inefficiencies.

The **CSF20 Film Coverslipper** helps histology, anatomic pathology, and cytology laboratories streamline slide preparation while reducing manual effort during the final stage of processing. Designed for high-volume environments, it delivers fast, consistent coverslipping that supports slide quality, minimizes rework, and reduces operator intervention and routine maintenance requirements.

WHY FILM COVERSLIPPING?

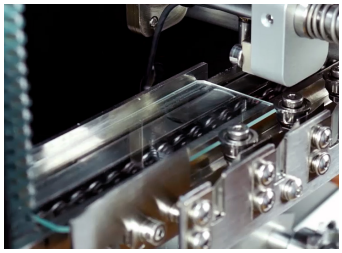
No glass coverslips to store or handle

No mounting media required

Rapid drying for improved workflow efficiency

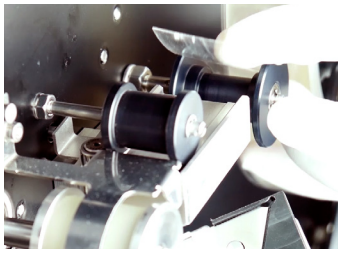
Duable slide protection for slide transport and archiving

DESIGNED TO MAKE A DIFFERENCE



HIGH-THROUGHPUT PERFORMANCE

Processes up to 1,200 slides per hour to help laboratories meet demanding workloads.



SIMPLIFIED COVERSLIPPING

Film-based technology eliminates glass coverslips and mounting media, reducing handling and consumable complexity.

INTUITIVE OPERATION

Easy-to-use touchscreen interface with real-time system monitoring.

WORKFLOW CONTINUITY

Rapid drying, simple consumable replacement, and minimal maintenance help keep slides moving.
